(57) Abstract :

A modified parabolic solar collector hot air drier suited for continuous drying of seven agricultural commodities, including onion and root vegetable products, is described herein. The invention's parabolic solar collector hot air dryer employs a black-colored hardwood chamber as heat storage and hot air as a heat transmission medium. As a possible consequence, parabolic solar collectors are the predominant solar heat source for air heating. The invention's modified parabolic solar dryer is meant to run entirely on solar energy during the peak 11 hours of sunlight. The invention enables rapid and effective drying of materials in enclosed circumstances, protecting the materials from environmental risks, and enables flash/quick drying of materials with appropriate drying temperatures and other acceptable kinetics.
