**B. TECH. (MECHANICAL ENGINEERING)** 

**SYLLABUS BOOK** 

AY 2024-25

## **INSTITUTE VISION**

To emerge as an Institute of Excellence by imparting value-based education aided with Research, Innovation and Entrepreneurial skills.

	INSTITUTE MISSION
1.	To impart the holistic engineering education of highest quality & prepare socially responsible
	professionals with entrepreneurial skills.
2.	To prepare value-aided engineering professionals to meet up global industry requirements by
	imparting cutting edge professional education.
3.	To inculcate the attitude of research and innovation among the stake holders through
	experiential and project-based teaching-learning pedagogy.
4.	To acquire global talent pool by providing world class amenities for teaching, learning &
	research.

Graduates will demonstrate ability to:

PEO No	PROGRAMME EUCATIONAL OBJECTIVES
PEO 1	Solve real-world engineering problems, design and develop innovative and cost-effective
	solutions exhibiting engineering skills/fundamentals to cater needs of society.
PEO 2	Excel in Industry/technical profession, higher studies, and entrepreneurship exhibiting
	comprehensive competitiveness.
PEO 3	Exhibit professional ethics & values, effective communication, teamwork, multidisciplinary
	approach, and ability to relate engineering issues to broader societal framework.

PO No	PROGRAMME OUTCOMES
PO 1	Engineering knowledge:
	Apply knowledge of engineering fundamentals, science, mathematics & engineering
	specialization for the solution of complex engineering problems.
PO 2	Problem analysis:
	Identify, formulate and analyze complex engineering problems leading to substantial
	conclusions using basic principles of mathematics, science and engineering.
PO 3	Design/development of solutions:
	Develop solutions for complex engineering problems and design system components or
	processes meeting specified needs having due consideration for the safety and societal &
	environmental considerations.
PO 4	Conduct investigations of complex problems:
	Use research-based knowledge & methods like design of experiments, analysis and
	interpretation of data, and synthesis of the information to provide valid & viable conclusions.
PO 5	Modern tool usage:
	Create, select, and apply appropriate techniques, resources, and modern engineering and IT
	tools for prediction and modeling of complex engineering activities with an understanding of
	the limitations.
PO 6	The engineer and society:
	Apply cognitive learning by the contextual knowledge to assess societal, health, safety, legal
	and cultural issues and following responsibilities relevant to the professional engineering
	practice.
PO 7	Environment and sustainability:
	Understand the impact of the professional engineering solutions in societal and
	environmental contexts, and demonstrate the knowledge & skill needed for sustainable
DO 0	Veluce & Ethice
PU 8	values & Ethics:
	Apply basic moral values & ethical principles and pleuge to professional ethics/norms and
PO Q	Individual and team work:
105	Function effectively as an individual/as a team member or as a leader in diverse teams and
	in multidisciplinary settings
PO 10	Communication:
1010	Communicate effectively on complex engineering activities with the engineering community
	and with society at large, such as, being able to comprehend and write effective reports and
	design documentation, make effective presentations, and give and receive clear instructions.
PO 11	Project management and finance:
	Demonstrate knowledge and understanding of the engineering and management principles
	and apply these to one's own work, as a member and leader in a team, to manage projects in
	multidisciplinary environments.
PO 12	Life-long learning:
	Recognize the need, do necessary preparation and ability to engage in independent and life-
	long learning in the broadest context of technological change.

PSO No	PROGRAMME SPECIFIC OUTCOMES (PSO)							
	MECHANICAL ENGINEERING							
PSO 1	Analyse, interpret and provide solutions to real life Mechanical Engineering problems.							
PSO 2	Develop an attitude to accept global challenges and apply Mechanical Engineering							
	knowledge for solving problems related to design, production, thermal and							
	interdisciplinary fields.							
PSO 3	Attain excellence in using managerial tools and techniques for effective and efficient							
	manufacturing and in developing research & leadership skills with ethical and							
	environmental practices.							

Credit Guidelines (General)									
Component	Hour/Week	Credit	Total Hours/Semester						
Theory	1	1	15						
Practical	2	1	30						
Tutorial	1	1	15						
Note: In specific cases; extra credits can be granted for specific/important subjects.

## **Objective(s) of the course:**

To help learners to

- summarize concept of calculus to enhance ability of analysing mathematical problems.
- acquire knowledge and ability to work with differentiation and integration for applications of mathematical techniques in engineering.
- develop the tool of convergence or divergence of any infinite series and power series for learning advanced Engineering Mathematics.
- acquire knowledge of partial differentiation and ability to work with applications to advanced Engineering Mathematics.
- application of concavity of graph and find out points of inflection.

	Section I								
Module No.	Content	Hours	Weightage in %						
1.	<b>Calculus</b> Limits, Continuity, Types of Discontinuity, Successive Differentiation, Rolle's Theorem, LMVT, CMVT, Maxima and Minima.	09	20						
2.	<b>Sequence and Series-I</b> Convergence and Divergence, Comparison Test, Integral Test, Ratio Test, Root Test, Alternating Series, Absolute and Conditional Convergence.	09	20						
3.	Sequence and Series-II Power series, Taylor and Maclaurin series, Indeterminate forms and L'Hospital's Rule.	05	10						
	Section II								
Module No.	Content	Hours	Weightage in %						
1.	Partial Derivatives	11	30						

	Function of several variables, Partial differentiation, Applications,		
	Chain rule, Linear approximations, Maxima and Minima, Euler's		
	theorem, Lagrange multiplier.		
	Curve tracing		
2.	Tracing of Cartesian Curves, Polar Coordinates, Polar and Parametric	11	20
	Form of Standard Curves, Areas and Length in Polar co-ordinates		
	TOTAL	45	100

## **Course Evaluation:**

Theory:

- Continuous Evaluation consists of two tests, each of 30 marks and 1 hour of duration and average of the same will be converted to 30 marks.
- Faculty evaluation consists of 10 marks as per the guidelines provided by the Course Coordinator.
- End Semester Examination consists of 60 marks.

## Tutorial:

- Continuous Evaluation consists of performance of tutorial which will be evaluated out of 10 marks for each tutorial and average of the same will be converted to 50 marks
- Continuous Evaluation consists of self-performance assignment to 20 marks.
- Internal Viva consists of 30 marks.

## Course Outcome(s):

After the completion of the course, the student will be able to

SESH1110	CALCULUS
CO 1	Recall the concepts of limit, continuity and differentiability for analysing
	mathematical problems.
CO 2	Analyze the series for its convergence and divergence to solve real world problems.
CO 3	Evaluate various limit problems using L' Hospital's rule.
CO 4	Identify the ordinary differentials and partial differentials and solve the maximum
	and minimum value of function.
CO 5	Construct the graphs for function with intervals and identify more application for
	function.

## **Course Evaluation:**

## Practical:

- Continuous Evaluation consists of Performance of Practical/Tutorial which will be evaluated out of 10 for each practical/Tutorial and average of the same will be converted to 30 Marks.
- Faculty evaluation consists of 10 marks as per the guidelines provided by the Course Coordinator
- Internal Viva consists of 30 Marks.
- Practical performance/quiz/drawing/test will consist of 30 Marks.

## **Course Outcome(s)**:

After the completion of the course, the following course outcomes will be able to:

SEME1110	HARDWARE WORKSHOP
CO 1	Apply the application of mechanical workshop such as fitting, drilling and carpentry.
	Understand various tools of mechanical workshop and understand its applications.
CO 2	Identify and inspect hardware components and interpret latest development of the
	field.
CO 3	Make students capable of analysing and solving the varieties of problems
	coming up in the electrical measurements and also enable the students to design as
	well as trouble shoots the circuits and networks through hands-on mode.
CO 4	Develop skill to build, and troubleshoot digital circuits.

10.	Draw a Flowchart to find maximum of two numbers in either draw.io or	02
	Microsoft Visio or Lucid Chart.	
11.	Study of different Google Apps.	04
12.	Create a Google Doc and Google sheet and share with 2 classmates.	02
13.	Demonstrate working of HlookUp and VlookUp in Excel.	02
14.	Create different types of charts in Excel.	04
15.	Demonstrate Data Analysis in Excel.	04
16.	Create a Google Website with minimum two pages showing your personal	04
	details.	
17.	Demonstrate embedding of a YouTube video and pdf document on a web	04
	page in google site.	
18.	Demonstrate placing Map and hyperlinks on web page in Google Site.	04
19.	Create a WordPress site and create minimum three web pages and menu to	04
	navigate between the pages.	
20.	Demonstrate the use of Accordion in WordPress.	02
	TOTAL	60

## **Course Evaluation:**

Practical:

- Continuous Evaluation consists of performance of practical, which should be evaluated out of 10 marks per each practical and average of the same will be converted to 10 marks.
- Internal viva consists of 20 marks.
- Practical performance/quiz/test consists of 30 marks during Internal practical Exam.
- Mini Project performance consists of 40 marks during End Semester Exam.

## **Course Outcome(s)**:

After the completion of the course, the student will be able to

SECE1110	Software Workshop
CO 1	Understand the types of computer software with their requirements and how to use
001	as per the need.
CO 2	Install different Operating Systems and learn commands used in the OS.
CO 3	Get familiar with the application software and different applications of application
	software
CO4	Achieve some useful information from data through analysis and represent it with
C04	different views like charts, graphs etc.
CO 5	Learn the designing and development of website to have a global communication.

## **Objective(s) of the Course:**

To help learners to,

- understand governance, regulatory, legal, economic, environmental, social, and ethical context of cyber security.
- equip students with the technical knowledge and skills needed to protect and defined against cyber threats.
- help students to protect the one's data, systems, and networks from malicious attacks and cyber threats.

	Section I

## **Objective(s) of the Course:**

To help learners to

- identify appropriate approach to computational problems.
- develop logic building and problem-solving skills.

Section I							
Module No.	Content	Hours	Weightage in %				
1.	<b>Motivation of Programming:</b> Use of Programming, Importance of Programming, Discussion of different Case Study	05	14				
2.	Welcome to Programming: Introduction of Programming, Flow Charts and Algorithms, Debugging, Tracing the execution of the Program, Watching Variables Values in Memory, Character Set, Keyword and Identifiers, Constants and Variables, Data Types - Declaration and Initialization, Basic Input, and Output Operations, Symbolic Constants, Overflow and Underflow of Data.	09	18				
3.	<b>Conditional Statements and Looping Statements:</b> Decision Making & Branching: Decision Making with If and If - else Statements, Nesting of If-else Statements, The Switch and go- to statements. Looping: The while Statement, The Break Statement & The Do While loop, The FOR loop, Jump within loops - Programs.	09	18				
	Section II	1	1				
Module No.	Content	Hours	Weightage in %				
1.	<b>Collection of Data:</b> Introduction, One-dimensional Arrays, Two-dimensional Arrays, Concept of Multidimensional Arrays, Declaring and	10	20				

	Initializing String Variables, Arithmetic Operations on		
	Characters, Putting Strings Together, Comparison of Two Strings,		
	String Handling Functions, Dictionary, List, Tuples and Sets.		
	Functions		
2	Introduction to Functions, defining a Function, Calling a	06	15
۷.	Function, Types of Functions, Function Arguments, Anonymous		15
	Functions, Global and Local Variables, Recursion		
	Building Desktop Application		
3.	Exploring the Tkinter Library in Python, Creating basic Desktop	06	15
	application using Tkinter	00	15
	TOTAL	45	100

## List of Practical:

Sr. No.	Name of Practical	Hours			
1.	Working with basic elements of C languages (different input functions,	2			
	different output functions, different data types, and different operators).	2			
2.	Working with control structures (if statement, if-else statement, nested if-	2			
	else statement, switch statement, break statement, goto statement).	2			
3.	Working with array and strings in C.				
4.	Introduction to Python (Introduction to IDLE, different data types, Input Output in	2			
	Python, Operators, Operator precedence).				
5.	Implementation of Dictionaries, Sets, Tuples and Lists and its various methods in				
	Python.	0			
6.	Working with functions in C/Python.	2			
7.	Working with recursive function in C/Python.	2			
8.	Building desktop application of your own calculator in Python.	4			
9.	Case Study:				
	a. Sorting : Arrange the books	6			
	b. Searching : Find in seconds	0			
	c. Recursion : Tower of Hanoi				
	TOTAL	30			

# Use of different libraries will be covered in Practical Assignments.

## **Course Evaluation:**

## Theory:

- Continuous Evaluation consists of two tests, each of 30 marks and 1 hour of duration and average of the same will be converted to 30 marks.
- Faculty evaluation consists of 10 marks as per the guidelines provided by the Course Coordinator.
- End Semester Examination consists of 60 marks.

## Practical:

- Continuous Evaluation consists of the performance of practical which will be evaluated out of 10 for each practical and average of the same will be converted to 20 marks.
- Internal viva consists of 20 marks.
- Practical performance/quiz/test consists of 30 marks during End Semester Exam.
- Viva/oral performance consists of 30 marks during End Semester Exam.

## **Course Outcomes:**

After completion of the course, the students will be able to

SECE1120	JOY OF PROGRAMMING
CO 1	Immediately analyze the syntax and semantics of the computer languages and apply it
	in programs.
CO 2	Implement computing solutions using logic building and problem-solving skills of a
02	given programming language.
CO 3	Interpret the fundamental language syntax, semantics and fluent in the use of python
05	or any computer language control flow statements.
CO 4	Determine the methods to create and manipulate programs by utilizing the data
	structures like lists, dictionaries, tuples and sets with emphasis on Python.

## **Objective(s) of the Course:**

To help learners to

- Prepare students for career in engineering where physics principles can be applied for the advancement of technology.
- Think in core concept of engineering application by studying various topics involved in branch specific application.

Section I					
Module No	Content	Hours	Weightage		
	QUANTUM PHYSICS				
1.	(Prerequisites: Dual nature of radiation, Photoelectric effect Matter waves, wave nature of particles, de-Broglie relation, Davisson-Germer experiment). Introduction; De Broglie hypothesis of matter waves; Properties of matter waves; Phase velocity and group velocity and their relation; Heisenberg uncertainty principle; non-existence of electron in nucleus; Wave function; Physical interpretation of wave function; Schrodinger's time dependent wave equation; time independent wave equation; Quantum Computing	07	16		
	ACOUSTIC AND IILTRASONIC				
2.	<ul> <li>(Prerequisites: Sound, propagation of sound, concept of frequency andwave length).</li> <li>Acoustic–Introduction, Classification and Characterization of Sound, Sabine's formula for reverberation (without derivation), Absorption Coefficients, Sound Absorbing Materials, factors affecting the acoustics of buildings and remedies, Sound Insulation. Ultrasonic – Introduction, Properties of Ultrasonic, Generation of Ultrasonic sound: Piezoelectric &amp; Magnetostriction</li> </ul>	07	16		

	effect, Applications of Ultrasonic.		
	LASER AND FIBRE OPTICS		
	(Prerequisites: Absorption, recombination, Valance and		
	conduction bands, refractive index of a material, Snell's law)		
	LASER – Introduction, Characteristics, Absorption, Spontaneous		
	and stimulated emission; metastable state, population inversion,		
3.	Pumping mechanism, components of LASER; Nd:YAG Laser,	08	18
	Applications of LASER.		
	FIBRE OPTICS – Introduction, Optical Fiber construction, working		
	principle and types, Numerical Aperture, Acceptance angle and		
	Attenuation, Fiber optic communication system, Applications of		
	Optical Fiber.		
	Section II		
Module	Content	Hours	Weightage
			in %
	NANOSCIENCE AND NANOTECHNOLOGY		
	(Prerequisites: Nano scale and structures, general purpose of nano		
	technology, method of formation of nano structure, fullerenes,		
1	carbon nanotubes).	06	14
1.	Nanomaterials: Properties (Physical, Mechanical, Optical,		
	Electrical, Magnetic); Surface to Volume Ratio; Synthesis of		
	Nanomaterials: Bottom up and Top down technique; Methods to		
	synthesize nanomaterials: PVD & Sol-gel, Applications.		
-	SUPERCONDUCTORS AND SUPERCAPACITORS		
	(Prerequisites: Electric current, flow of electric charges in a		
	metallic conductor, drift velocity, mobility and their relation with		
	electric current, Ohm's law, electrical resistance, V-I		
	characteristics (linear and non-linear), electrical resistivity and		
	conductivity temperature dependence of resistance).	08	18
2.	Superconductors: Introduction, Critical temperature, Properties		
	of superconductors, Type of superconductors: Type I and Type II		
	and high Tc superconductors, Applications: Magnets, Josephson		
	effect, SQUID, Maglev, other.		
	Supercapacitors: Principle, construction, materials and		
	Applications, comparison with capacitor and batteries: Energy		
	density, Power density.		
	SEMICONDUCTOR PHYSICS AND TECHNOLOGY		
3.	(Prerequisites: Intrinsic and extrinsic semiconductors, Energy		
	bands in conductors, semiconductors and insulators,		
	Semiconductor diode, I-V characteristics in forward and reverse		
	bias) Direct & indirect band gap semiconductor; Fermi level;		
	Fermi energy level in intrinsic & extrinsic semiconductors; effect	09	18
	of impurity concentration and temperature on fermi level:		
	mobility, current density: Hall Effect: Fermi Level diagram for p-n		
	junction (unbiased, forward bias, reverse bias): Applications of		
	semiconductors: LED, Zener diode, Photovoltaic cell.		

TOTAL	45	100

## List of Practical:

Sr. No	Name of Practical	Hours
1.	Analysis of errors.	04
2	To measure diameter of a small spherical body using Vernier calipers and	04
۷.	hencefind its volume.	
3.	To measure the diameter of given object using micrometer screw gauge.	04
4.	Verify ohm's law using ammeter and voltmeter.	04
5.	To study the series and parallel connections of resistors.	02
6.	To study the series and parallel connections of capacitors.	02
7.	I-V characteristics of Light Emitting diode (LED).	02
8.	I-V characteristics of Zener diode.	04
9.	To determine Numerical aperture and acceptance angle of an optical fiber.	04

## **Course Evaluation:**

## Theory:

- Continuous Evaluation consists of two tests each of 30 marks and 1 Hour of duration, which will be converted to 30 marks.
- Faculty evaluation consists of 10 marks as per the guidelines provided by the course coordinator.
- End Semester Examination consists of 60 marks.

## Practical:
- Continuous Evaluation consists of Performance and regular manual writing,
- Internal viva or practical performance consist of 20 Marks. Faculty evaluation consists of 10 marks as per the guidelines provided by the course coordinator.
- Practical performance/test of 30 marks during End Semester Exam.
- Viva/Oral performance of 30 marks during End Semester Exam.

#### Course Outcome(s):

After completion of the course, the student will be able to

SESH1130	Conceptual Experimental Physics				
CO 1	Understand the framework of quantum mechanics and apply the knowledge ofbasic				
	quantum mechanics to construct one dimensional Schrodinger's wave equation.				
CO 2	Classify the phenomenon of acoustics and ultrasonic in various engineering field and				
	apply it for various engineering and medical fields.				
CO 3	Describe the laser and articulate the idea of optical fiber communications and apply				
	the concepts of lasers and optical fiber communications in every possiblesector.				
CO 4	Interpret the concept of Nanotechnology and understand the synthesis and				
	applications of Nanomaterials from technological prospect. Discover the types and				
	properties of Superconductors. Relate the behavior of superconductors at				
	high temperatures				
CO 5	Distinguish pure, impure semiconductors and characteristics of				
	semiconductor devices. Thus, will be able to use basic concepts toanalyze and				
	design a wide range of semiconductor devices.

#### **Objective(s) of the Course:**

To help learners to

- Understand the basic concepts of chemistry, including atoms, molecules, and chemical processes.
- Apply the scientific method to examine chemical phenomena, including the design and execution of experiments, data analysis, and evidence-based conclusion drawing.
- Evaluate the causes and consequences of environmental problems and propose solutions based on scientific evidence.
- Integrate knowledge from multiple disciplines to analyze environmental problems and propose effective solutions.

	Section I					
Module	Content	Hours	Weightage			
NU.	Introduction to Chomistry		111 70			
1.	Overview of the scientific method and chemistry as a science, Basic concepts of matter, including atoms, molecules, and the periodic table, Introduction to chemical bonding and intermolecular forces, Basic principles of chemical reactions, including stoichiometry and reaction types	06	15			
2.	<b>Chemical Thermodynamics and Kinetics</b> Introduction to thermodynamics and the laws of thermodynamics, Energy and enthalpy changes in chemical reactions, Introduction to chemical kinetics and reaction rates, Factors affecting reaction rates, including temperature, concentration, and catalysts	06	15			
3.	<b>Properties of Matter and Solutions</b> Physical properties of matter, including states of matter and phase changes, Solutions and their properties, including solubility and colligative properties, Introduction to acids and bases and their properties, Chemical equilibrium and the equilibrium constant	05	10			

	Organic Chemistry		
	Introduction to organic chemistry and the basics of carbon		
4.	chemistry, Functional groups and their properties, Nomenclature	06	10
	and isomerism in organic compounds, Introduction to organic		
	reactions and mechanisms

#### **Course Evaluation:**

Theory:

- Continuous Evaluation consists of two tests each of 30 marks and 1 Hour of duration, which will be converted to 30 marks.
- Faculty evaluation consists of 10 marks as per the guidelines provided by the course coordinator.
- End Semester Examination consists of 60 marks.

#### Practical:

- Continuous Evaluation consists of performance of Practical which will be evaluated out of 10 marks for each practical and average of the same will be converted to 20 marks.
- Internal Viva consists of 20 marks.
- Practical performance/quiz/drawing/test of 30 marks during End Semester Exam.
- Viva/Oral presentation consists of 30 marks during End Semester Exam.

#### Course Outcome(s):

After completion of the course, the student will be able to

SECH1110	Fundamental Chemistry & Environmental Science
CO 1	Develop a fundamental understanding of the principles and concepts of chemistry,

	including atomic structure, chemical reactions, and chemical bonding.
CO 2	Demonstrate an ability to apply chemical knowledge to real-world problems, such as
	calculating reaction yields and predicting chemical properties.
CO 3	Identify the types of pollution in society along with their sources.
CO 4	Realize the global environmental issues.

# **Objective(s) of the Course:**

To help learners to

- Know conventions and the methods of engineering drawing.
- Interpret engineering drawings using fundamental technical mathematics.
- Construct basic and intermediate geometry.
- Improve their visualization skills so that they can apply these skills in developing new products.
- Improve their technical communication skill in the form of communicative drawings.
- Comprehend the theory of projection.
- Basic knowledge of computer-aided drawing using AutoCAD.

	Section I					
Module	Contents	Lab	Weightage			
No.		Hours	in %			
	Introduction:					
1.	Importance of the Course; Use of Drawing Instruments and					
	accessories; BIS – SP – 46; Lettering, Dimensioning, and Lines;	03	05			
	Representative Fraction; Types of Scales (Plain and Diagonal					
	Scales); Construction of Polygons.					
2.	Engineering Curves:					
	Classification and Application of Engineering Curves;	12	15			
	Construction of Conics, Cycloidal Curves, Involutes, Spiral, and					
	Normal & Tangent to each curve.					
	Projections of points, lines & planes:					
	Types of Projections; Introduction of Principle Planes of					
3.	Projections; Projection of Points in all four Quadrants; Projection of					
	Lines inclined to one Referral Plane & two Referral Planes. True	15	30			
	length and inclination with reference plane; Projection of Planes					
	(Circular and Polygonal) with inclination to one Referral Plane and					

two Referral Planes; Concept of Auxiliary Projection Method.

#### **Objective(s) of the Course:**

To help learners to

- Study the basic fundamentals of construction planning and material.
- Study significance of mechanical engineering systems in different fields of engineering.
- Study the basic concepts of electrical and electronics engineering.

	Section I					
Module	Content	Hours	Weightage			
No.			in %			
1.	Basics of Construction material and techniques					
	Common materials used in construction, Aggregate, Sand, Cement,					
	Bricks, Timber, Steel, Paints. Bonds in brick masonry techniques,	08	18			
	Foam works, Curing, Compaction of concrete, Water proofing, Fire					
	safety norms and requirement.					
2.	Building planning and Bye laws					
	Building by laws as per national building code, building by laws as per					
	local authority, standards for residential, public, commercial,					
	industrial and institutional buildings planning, planning of earth	08	18			
	quake resistance building, overview of RERA and ODPS, Green					
	building and LEED certification, general layout, maps and plan used					
	at construction site.					
3.	Basic Electricity Principles					
	Concept of Charge, Potential Difference and Current, Resistor,					
	capacitor, Inductor, Ohm's law, effect of Temperature on resistance,					
	temperature coefficient, Series and parallel combinations of					
	Resistors and capacitors, Lenz and Faraday's laws for	07	14			
	electromagnetic induction, AC Electricity and DC Electricity.					
	<b>Electrical Wiring:</b> Different types of conductors and cables. Basics					
	of wiring-star and delta connection. Voltage drop and losses across					
	cables and conductors.					
	Section II					

Module	Content	Hours	Weightage
No.			in %
1.	Basics of I.C Engines:		
	Construction and working of 2 Stroke & 4 Stroke Petrol and Diesel		
	Engines, Difference Between 2-Stroke - 4 Stroke Engine & Petrol-	08	18
	Diesel Engine, Efficiency of I. C. Engines.		
2.	Power Transmission Elements:		
	Construction and Applications of Couplings, Clutches and	00	10
	Brakes, Difference Between Clutch and Coupling, Types of Belt Drive	00	10
	and Gear Drive		
3.	DC Circuits and AC Circuits		
	DC Circuits:		
	Introduction of Electrical circuit elements (prerequisites), voltage		
	and current sources, Kirchoff's current and voltage laws, Thevenin		
	and Norton Theorems. Time-domain analysis of first-order RL and RC		
	circuits.		
	AC Circuits:	06	14
	Representation of sinusoidal waveforms, peak and RMS values,	00	14
	Phasor representation of AC quantities, real power, reactive power,		
	apparent power, power factor, Analysis of single-phase ac circuits		
	consisting of R, L, C, RL, RC, RLC combinations (series and parallel),		
	Series and parallel resonance. Three phase balanced circuits, voltage		
	and current relations in star and delta connections, Power		
	measurement in three phase circuits.

# **Objective (s) of the course:**

To help learners to

- Describe the idea of LSRW English communication abilities, for dealing with people in typical social and/or professional circumstances.
- Infer and react to instructions, paragraphs, articles, official and informal communication, and reading and listening.
- Select and demonstrate the appropriate language, grammar, and pronunciation for typical social or professional contexts.
- Analyse and present instances of effective business-related spoken English.
- Organise your thoughts to create a paragraph that flows smoothly and develop a speech script.
- Make an effort to communicate, take part in a discussion in a small group, and write.

S.No.	Content	Hours	Weightage in %
	Section 1		
1.	<b>Listening</b> Listening to the recording on various topics and responding. The topics may be: Personal information, Travel Information, Listening to radio interviews and summarizing. Students will be expected to demonstrate a level of listening competence as outlined in listening outcomes.	15	25
	Section 2		
2.	<b>Reading and Language</b> Reading various online articles, short stories to develop content to present and discuss. Using collocations, Using a Dictionary. Guessing the context and summarising. Students will be expected to demonstrate a level of reading competence as outlined in reading outcomes.	15	25

	Section 3						
3.	Speaking Skills, Non-Verbal Aspects	15	25				
	Role-plays, Real-life speaking, Presentation by a Company						
	Director, Listening to statistical information, Interview						
	techniques. Students will be expected to demonstrate a level of						
	speaking competence as outlined in learning outcomes.						
	Section 4						
4.	Writing	15	25				
	Noting and changing appointments. Writing e-mails, Applying						
	for a Job, Writing a Business Report, Summarising, Linking ideas						
	and arguments. Students will be expected to demonstrate a level						
	of						
	Speaking competence as outlined in writing outcomes.

#### **Objective(s) of the Course:**

To help learner to

- learn orientation of calculus and its applications in solving engineering problems including differential equations.
- learn introduction of Partial Differential Equations with methods of its solutions.
- learn applications of Laplace Transforms for solving ODEs.
- learn introduction of Periodic functions and Fourier series with their applications for solving ODEs.
- Represent complex numbers algebraically and geometrically.

	Section I						
Module No.	Content	Hours	Weightage in %				
1.	Ordinary Differential Equation First order ODEs, Formation of differential equations, Exact, linear and Bernoulli's equations, Ordinary differential equations of higher orders, Homogeneous Linear ODEs of Higher Order, Homogeneous Linear ODEs with Constant Coefficients, Euler–Cauchy Equations Differential Operators Nonhomogeneous ODEs, Variation of Parameters.	10	20				
2.	Partial Differential Equation Formation of First and Second order equations, Solution of First order Linear and Non-liner equations, Higher order equations with constant coefficients, Complementary function, Particular Integrals, Initial and boundary conditions, Modeling and solution of the Heat, Wave and Laplace equations.	08	17				
3.	Laplace Transform Laplace Transform, Linearity, First Shifting Theorem, Existence Theorem, Transforms of Derivatives and Integrals, Unit Step Function,	07	13				

	Second Shifting Theorem, Laplace Transformation of Periodic											
	function, Inverse Laplace transform, Convolution, Systems of ODEs

#### **Course Evaluation:**

#### Theory:

- Continuous Evaluation consists of two tests each of 30 marks and 1 Hour of duration, which will be converted to 30 marks.
- Faculty evaluation consists of 10 marks as per the guidelines provided by the course coordinator.
- End Semester Examination consists of 60 marks.

#### **Tutorial**:

- Continuous Evaluation consists of performance of tutorial which will be evaluated out of 10 marks for each tutorial and average of the same will be converted to 50 marks.
- MCQ based examination consists of 20 marks.
- Internal Viva consists of 30 marks.

#### Course Outcome(s):

After completion of the course, the student will be able to

SESH2110	DIFFERENTIAL METHODS & COMPLEX VARIABLE
C01	Describe 1st and 2nd order odes and pde's.
C02	Classify differential equations and evaluate linear and nonlinear partial differential equations.
CO3	Apply Laplace transform as a tool which are used to evaluate differential equation.
C04	Examine the various tests of power series and Fourier series for learning engineering.
CO5	Demonstrate understanding of the basic concepts underlying complex analysis to evaluate definite integrals and infinite series.

#### **Objective(s) of the Course:**

To help learners to

- identify different aspects of thermodynamics and their application.
- interpret different laws of thermodynamics and their application to field and daily life.
- understand various gas laws and equations of state and their application.
- understand the role of entropy, exergy to the universe.

	Section I						
Module	Content	Hours	Weightage				
No.			in %				
	Basic Concepts of Thermodynamic						
	Classical and statistical thermodynamic approach, Thermodynamic:						
1.	system, properties, states, processes, cycle &equilibrium, Concepts of:	05	07				
	control volume and control surface, Specific heat capacity, Internal						
	Energy, Enthalpy, Specific						
	Volume, heat and work.						
	First and Second law of Thermodynamics						
	First law for a closed system undergoing a cycle and change of state,						
	energy, PMM1, First law of thermodynamics for a non- flow and flow						
2.	process. Limitations of first law of thermodynamics, Statements of	08	20				
	second law of thermodynamics and their equivalence, PMM2,						
	Carnot's theorem, Corollary of						
	Carnot's theorem, Causes of irreversibility.						

	Entropy		
	Clausius theorem, property of entropy, Clausius inequality, entropy		
3.	change in an irreversible process, principle of increase of entropy,	05	15
	entropy change for non-flow and flow processes, third law of		
	thermodynamics, PPM3, Entropy change for phase		
	changing process.		
	Exergy		
	Energy of a heat input in a cycle, exergy destruction in heat transfer		
4.	process, exergy of finite heat capacity body, exergy of closed and	05	08
	steady flow system, irreversibility and Gouy-Stodola theorem and its		
	applications, second law efficiency.		
	Section II		
Module	Content	Hours	Weightage
No.			in %
	Vapour Power Cycles		
5.	Carnot vapor cycle, Rankine cycle, comparison of Carnot and	06	15
	Rankine cycle, carnot cycle efficiency, variables affecting efficiency of		
	Rankine cycle.		
	Gas Power Cycles		
	Carnot, Otto and Diesel cycle, Dual cycle, Comparison of Otto, Diesel		
6.	and Dual cycles, air standard efficiency, mean effective pressure,	06	15
	brake thermal efficiency, relative efficiency, Brayton cycle.		
	Properties of gases and gas mixtures		
	Avogadro's law, equation of state, ideal gas equation, Vander Waal's		
7.	equation, reduced properties, law of corresponding states,	06	12
	compressibility chart, Gibbs-Dalton law, internal energy; enthalpy		
	and specific heat of a gas mixtures.		
	Cryogenic Refrigeration System:		
	Ideal isothermal and reversible isobaric source refrigeration cycles,	04	08
	Joule Thomson system, cascade or pre-cooled joule-Thomson		
	refrigeration systems, expansion engine and cold gas effectiveness for		
8.	the Philips refrigerators, Gifford single volume refrigerators analysis,		
	COP, FOM, refrigerators, pulse tube refrigerators, various types of		
	pulse tube refrigerator.		
	Refrigerators using solids as working media		
	Magnetic cooling, magnetic refrigeration systems, thermal, valves,		
	nuclear demagnetization.

#### **Course Evaluation:**

#### Theory:

- Continuous evaluation consists of two tests each of 30 marks and 1 hour of duration and average of the same will be converted to 30 marks.
- Faculty evaluation consists of 10 marks as per the guidelines provided by Course Coordinator.
- End Semester Examination will consist of 60 marks.

#### Practical:

- Continuous Evaluation consists of performance of practical which should be evaluated out of 10 marks for each practical and average of the same will be converted to 20 marks.
- Internal viva consists of 20 marks.
- Practical performance/quiz/drawing/test consists of 30 marks during End Semester Exam.
- Viva/Oral performance consists of 30 marks during the End Semester Exam.

#### Course Outcome(s):

After the completion of the course, the following course outcomes will be able to:

SEME2231	MANUFACTURING TECHNOLOGY – I
C01	Articulate basic knowledge of manufacturing processes to implement in professional
	skills.
CO2	Describe patternmaking process and casting defects
CO3	Differentiate various casting processes for good manufacturing practices.

CO4	Demonstrate gas welding and cutting process for different application							
CO 5	Identify, classify and apply arc & resistance welding processes used for various							
	applications in industrial practice.

## **Objective(s) of the Course:**

To help learners to

- understand different types of forces, systematic evaluation of effect of these forces, behavior of rigid and deformable bodies subjected to various types of forces at the state of rest or motion of the particles.
- understand the stresses developed under the application of force.
- understand the physical and mechanical properties of materials.
- understand the behavior of structural elements under the influence of various loads.

	Section I							
Module No.	Content	Hours	Weightage in %					
1.	<b>Introduction:</b> Definition of Rigid Body, Deformable Body, Scalar and Vector Quantities, Fundamental Principles of Mechanics: Principle of	05	11					
1.	Transmissibility, Principle of Superposition, Law of Parallelogram of Forces.							
2.	<ul> <li>Fundamental of Static:</li> <li>Force, Types of Forces, Characteristics of a Force, System of Forces, Composition and Resolution of Forces.</li> <li>Concurrent Forces: Resultant of Coplanar Concurrent Force System by Analytical Method, Law of Triangle of Forces, Law of Polygon of Forces, Equilibrium Conditions for Coplanar Concurrent Forces.</li> <li>Non-Concurrent Forces: Moments &amp; Couples, Characteristics of Moment And Couple, Varignon's Theorem, Resultant of Non-Concurrent Forces by Analytical Method, Equilibrium Conditions of Coplanar Non-Concurrent Force System.</li> </ul>	06	14					
3.	Centroid and Centre of Gravity:	05	11					

	Centroid of Lines, Plane Areas and Volumes, Examples Related to		
	Centroid of Composite Geometry, Pappus –Guldinus Theorems.		
4.	Moment of Inertia: Parallel and Perpendicular Axis Theorems, Polar Moment of Inertia, Radius of Gyration of Areas, Examples related to moment of Inertia of Composite geometry.	06	14
	Section II		
Module No.	Content	Hours	Weightage in %
5.	Mechanical Properties of Materials: Introduction, Classification of Materials, Properties Related to Axial, Bending, and Torsional & Shear Loading, Toughness, Hardness, Ductility, Brittleness. Proof stress, Factor of Safety, Working Stress, Load Factor.	04	12
6.	Simple Stress and Strain: Definition of Stress and Strain, Tensile & Compressive Stresses: Shear and Complementary Shear Strains, Linear, Shear, Lateral, Thermal and Volumetric. Hooke's Law, Stresses and Strain in bars of Varying, Tapering & Composite Section, Principle of Superposition. Elastic Constant, Relation between Elastic Constants.	07	15
7.	<b>Shear Force and Bending Moment:</b> Introduction, Types of Loads, Supports and Beams, Shear Force, Bending Moment, Sign Conventions for Shear Force & Bending Moment. Statically Determinate Beam, Support Reactions, SFD and BMD for Concentrated Load and Uniformly Distributed Load, Uniformly Varying Load, Point of Contra-flexure.	12	23
	TOTAL	45	100

# List of Practical (Any Ten):

Sr. No	Name of Practical	Hours
1.	Equilibrium of coplanar concurrent forces	02
2.	To verify the law of parallelogram of forces	02
3.	To verify the law of polygon of forces	02
4.	To verify the Lami's theorem	02
5.	Equilibrium of parallel force system – simply supported beam	02
6.	Tensile test on Ductile materials.	02
7.	Compression test on Ductile materials	02
8.	Compression test on Brittle Materials	02
9.	Determination of hardness of metals (Brinell/ Rockwell hardness test)	02
10.	Determination of impact of metals (Izod/ Charpy impact test)	02
11.	Tutorial on concurrent & Non-concurrent forces	04
12.	Tutorials on C. G & MI	02
13.	Tutorials on SFD & BMD	04

#### Course Outcome(s):

After the completion of the course, the following course outcomes will be able to:

SEME2250	FLUID MECHANICS
CO 1	Differentiate fluid properties and its behavior in static and dynamic mode.
CO 2	Apply dimensional analysis to design the system and interpret types of fluid flow.
CO 3	Determine major and minor losses through different pipes.
CO 4	Diagnose the viscosity of fluids.
CO 5	Diagnose pressure exerted by the fluids and rate of flow of fluids.

## **Department of Mechanical Engineering**

Course Code: SEME2260 Course Name: Mechanical Measurement & Metrology Prerequisite Course(s): -- None

#### **Teaching & Examination Scheme:**

Teaching Scheme (Hours/Week)				Exar	ninatior	n Scheme	e (Marks	)		
Theory	Practical	Tutorial	Credit	Theory		Theory Practical		Tuto	orial	Total
				CE	ESE	CE	ESE	CE	ESE	
03	02	-	04	40	60	40	60	-	-	200

CE: Continuous Evaluation, ESE: End Semester Exam

## **Objective(s) of the Course:**

To help the learners to

- know various types and methods of measurement.
- assess the suitability of measuring instruments.
- describe the basic concepts of metrology.
- know how to operate different types of mechanical measuring instruments.
- explain the different instruments used in industry.
- evaluate quality of surface produced using various methods of measurements.

	Section I					
Module	Content	Hours	Weightage			
No.			in %			
	Principles of Metrology					
1.	Concept of Metrology, Need for inspection, Linearity,	02	05			
	Repeatability, Sensitivity and readability, Precision &					
	Accuracy, Standards of measurements.					
	Screw threads and gear Metrology					
	Measurement of Screw thread: Screw terminology, Errors in threads,					
	measuring elements of the internal and external threads.					
2.	Measurement of Gear: Introduction and Classification of gears,Forms	08	15			
	of gear teeth, Gear tooth terminology, Measurement and testing of					
	spur gear: Various methods of measuring tooth thickness, tooth					
	profile and pitch, Gear Errors.					
	Surface Roughness Metrology					
3.	Introduction, Surface Texture, Methods of Measuring Surface finish,	04	09			

	Comparison Methods and Direct Instrument Measurement,		
	Sample Length, Numerical Evaluation of Surface Texture, Indication		
	of Surface roughness Symbols used, Adverse effects of poor		
	surface finish		
	Straightness, Flatness, Squareness, Parallelism and Machine		
	Tool Tests		
	Introduction, Measurement of Straightness, Flatness, Squareness and		
4.	Parallelism, run out and concentricity, Tool makers microscope,	05	12
	Interferometry and its use in checking flatness, surface contour,		
	parallelism etc., Interferometers andoptical flats, Introduction to		
	Machine tool testing; Various Alignment test on lathe, Milling		
	Machine, Drilling Machine etc.		
	Miscellaneous Metrology		
5.	Measurement of Force, Torque, Power, Measurement of	04	09
	displacement, Velocity and Acceleration, Measurement ofSpeed		
	and Frequency		
	Section II		
Module	Content	Hours	Weightage
No.			in %
	Measurement Concept		
	Economics of measurement, Need of mechanical measurement,		
	Basic definitions: Hysteresis, Linearity, Resolution of measuring		
6.	instruments, Threshold, Drift, Zero stability, loading effect and	04	09
	system response. Source of Errors and their classification. Methods		
	of measurement and performance characteristics		
	Linear Measurements		
	Precision and Non-precision linear Measurements, Vernier caliper,		
7.	Micrometer, Use of End standard – Slip Gauge, Indian standard on	06	14
	Slip gauge, Care and use of slip gauge for workshop and inspection		
	purpose, Telescopic gauge, Comparators.		
	Angular and Taper Measurements		
	Introduction; Working principle and construction of Angular		
8.	Measuring instruments like Protractors, Sine bars, Sine Centre, Angle	04	09
	gauges, Spirit level, Clinometers, Angle dekkor, Taper Measuring		
	Instruments: Measurement of taper shafts and Holes		
	Temperature measurement		
	Temperature scales, Temperature measuring devices. Methods of		
9.	Temperature Measurement, Expansion Thermometers: Filled System	04	09
	thermometers; Electrical Temperature Measuring Instrument.	-	
	Pyrometers; Calibration of Temperature Measuring Instruments.		
	Reliability and calibration.		

	Inspection Technologies		
10.	History of Coordinate Measuring Machines, Important feature of	04	09
	CMM, CMM construction, CMM Operation and Programming,		
	Performance of CMM, Possible causes of errors in CMM, Trigger type		
	and Measuring type probes in computer controlled CMM, Accuracy		
	Specification for CMM, Calibration of CMM, CMM Applications and		
	Benefits, Role of computer in field of Metrology, Advances in		
	Metrology.		
	TOTAL	45	100

## List of Practical:

Sr No	Name of Practical	Hours
1.	Study of various instrument characteristics	02
2.	Study, Use and calibration of Linear Measuring Instruments	08
3.	Study and use of slip gauge	02
4.	Study of angle measurement using (a) Bevel Protractor (b) Combination	08
	Set and (c) Sine Bar	
5.	Study of Temperature Measurement	02
6.	Study of Surface Roughness Tester	02
7.	Study of Gear Tooth Measurement	02
8.	Study Strain gauge Transducer	04
9.	Study of Coordinate Measuring Machines (CMM) (Industrial Visit)	-
	TOTAL	30

## **Course Evaluation:**

#### Theory:

- Continuous evaluation consists of two tests each of 30 marks and 1 hour of duration and average of the same will be converted to 30 marks.
- Faculty evaluation consists of 10 marks as per the guidelines provided by Course Coordinator.
- End Semester Examination will consist of 60 marks.

#### Practical:

- Continuous Evaluation consists of performance of practical which should be evaluated out of 10 marks for each practical and average of the same will be converted to 20 marks.
- Internal viva consists of 20 marks.
- Practical performance/quiz/drawing/test consists of 30 marks during End Semester Exam.
- Viva/Oral performance consists of 30 marks during the End Semester Exam.

#### Course Outcome(s):

After the completion of the course, the following course outcomes will be able to:

SEME2260	MECHANICAL MEASUREMENT & METROLOGY			
CO 1	Select linear and angular measuring instrument for measurement of various			
	components			
CO 2	Distinguish between various gears and screws by measuring their dimensions			
CO 3	Measure surface finish of the component produced			
CO 4	Compare appropriate temperature measuring device for various applications			
CO 5	Describe methods of measurement for various quantities like force, torque, power,			
	displacement.			

#### Mapping of CO with PO

CE: Continuous Evaluation, ESE: End Semester Exam

## **Objective(s) of the Course:**

To help the leaners to learn:

- basics types of mechanism, degree of freedom, joints.
- about velocity and acceleration analysis for different mechanism.
- about kinematic analysis of cam and follower motion.
- about types of belts, ropes, chain and gears drives and its applications.

Section I					
Module	Content	Hours	Weightage		
No.			in %		
1.	Basics of Mechanisms Introduction, Mechanism and machine, Rigid and resistant body, Link, Kinematic pair, Types of motion, Degrees of freedom (mobility), Classification of kinematic pairs, Kinematic chain, Linkage, Mechanisms, Kinematic inversion, Inversions of slider crank chain, Synthesis of Mechanism, Double slider- crank chain, Quick return	06	10		
2.	Velocity Analysis Vectors, Displacement of a rigid body, Relative displacement, Definition of velocity, Angular velocity, Rotation of a rigid body, Translation and rotation of a rigid body, Relative velocity method (graphical and analytical), Instantaneous axes of motion, Properties of instantaneous centers, The Aronhold - Kennedy theorem of three centers, Velocity analysis by instantaneous centers. The line-of- centers method, Velocity analysis by components, Velocity images, Velocity diagrams.	12	20		

	Acceleration Analysis		
	Definition of acceleration, Angular acceleration, A general case of		
3.	acceleration, Radial and transverse components ofacceleration, The	12	20
	coriolis component of acceleration, Examples		
	of acceleration analysis, Acceleration diagrams.		
	Section II		
Module	Content	Hours	Weightage
No.			in %
	Kinematics of Belts, Ropes and Chain Drives		
	Introduction, Belt and rope drives, Open and crossed belt drives,		
	Velocity ratio, Slip, Materials for belt and ropes, Law of belting, Length		
4.	of belt, Ratio of friction tensions, Power transmitted, Centrifugal	07	10
	effect on belts, Maximum power transmitted by a belt, Initial tension,		
	Creep, Chains, Chain length, Angular speed ratio, Classification of		
	chains.		
	Kinematics of Gears		
	Introduction, Classification of gears, Gear terminology, Law of		
	gearing, Velocity of sliding, Forms of teeth, Cycloidal profile teeth,		
	Involute profile Teeth, Comparison of Cycloidal and involute tooth		
5.	forms, Path of contact, Arc of contact, number ofpairs of teeth in	15	20
	contact, Interference in involute gears, Minimum number of teeth,		
	Interference between rack and pinion, Undercutting, Introduction to		
	helical, Spiral, Worm, Worm gear and bevel gears.		
	Kinematics of Cams		
6.	Introduction, Types of cams, Types of followers, Cam terminology,	08	20
	Displacement diagrams, Motions of the follower, Graphical		
	construction of cam profile, High Speed CAM.		
	TOTAL	60	100

# List of Practical:

Sr No	Name of Practical	Hours
1.	To measure the ratio of time of cutting stroke to the return stroke in shaping	02
	machine by varying the stroke length.	
2.	To understand the ratio of time of cutting stroke to the return stroke in shaper	08
	machine by varying the stroke length.	
3.	To estimate kinematic data related to bicycle free wheel sprocket mechanism and	02
	Geneva mechanism.	
4.	To prepare different kinematic links and to determine velocity and acceleration	08
	by relative velocity method for analysis of motion links.	
5.	To draw a radial cam profile for given follower type to obtain desired follower	02
	motion.	
6.	To estimate the slip, length of belt, angle of contact in open and cross belt drive.	02

7.	To assemble and dismantle different clutches.	02
8.	To measure radius and height of all types of governors for different rotational	04
	speeds and mass of balls.	
9.	To perform balancing of rotating unbalanced system.	-
	TOTAL	30

- Viva/Oral performance consists of 30 marks during the End Semester Exam.

#### Course Outcome(s):

After the completion of the course, the following course outcomes will be able to:

SEME2270	KINEMATICS OF MACHINERY
CO 1	Understand the essential components of linkage and mechanism in the assembly of
	machines.
CO 2	Analyze the assembly with respect to the displacement, velocity, and acceleration at
	any point in a link of a mechanism.
CO 3	Apply the concept of the belt, rope, chains, and gear drives in machines operations.

CO 4	Understand a power transmission machine's element and its mechanism to solve			
	problems associated with it.			
CO 5	Design a layout of cam and follower for specific motion.
